Our Services

Our Services

Security and Application Assessments

We look for weaknesses and analyze the overall security and maintainability of your applications from a broad overview down to each character in the code. We work with a variety of application stacks including PHP and Microsoft's .NET.

Platform Management and Consulting

Keeping your infrastructure and applications running 24/7 is what we do. We'll give insight and analytics on how your platform is performing so that you can watch your OS, middleware, and software. If you want more than a self-service dashboard of tools, we have can manage your patching, monitoring, and incident response, too. Not sure how you're going to deliver your app to customers? We can help you design the infrastructure that will support your goals and keep your apps secure, fast, and always available.

Application and Software Architecture, Design, and Development

We know software. We can build it from scratch or we can partner with you to ensure that what you're building is turning out the way you want. We specialize in .NET, PHP, and iOS platforms.

Systems & Infrastructure Design and Engineering

Cloud and on-prem network, hosting, and system design, from deep experience with both Windows and Linux-based hosts to large-scale datacenter topology, security, and physical design. Specific expertise in cloud strategy for use of SaaS, PaaS, and Azure/AWS/GCP-native solutions for private and public sectors.

About Us

We're a Hawaii-based, full-service technology group with expertise in software development, security, and infrastructure management. We offer a broad range of engineering and consulting services to help you and your business grow. Want a more technical explanation of everything we do? Call us.
